

Meistream with GWFcoder[®] MP

Bulk water meters

Your benefits

- Revolutionary Multiprotocol interface:
Investment security due to the interoperability of the meter
- Transfer of the effective meter reading:
No data loss and guaranteed security of the billing data
- No programming required when commissioning the meter in a readout system (Plug & Play):
Easy and fast on-site installation
- Measurement of low flow rates:
Increased cost effectiveness
- Removable measuring insert:
Retrofittability and replaceability guaranteed
- One measuring insert for various bodies:
Lower storage costs

Applications

- Measurement of high flow rates, e.g.
 - Downstream of pumps or at transfer points
 - Reservoir inflows and outflows
- Measurement of low flow rates during offpeak periods
- Automated mobile or fixed network readout of relevant billing data
- Wired or radio remote readout of hard to access metering installations, e.g. meter pits, reservoirs

Properties

- Universal installation position
- No straight flow section required before the meter
- Register can be turned through 355°
- Maximum operating pressure PN 16 bar
- Temperature up to 50 °C
- Rotor is hydrodynamically, radially, and axially balanced
- Available in the standard installation lengths for WS and WP meters
- Powder coating provides optimum corrosion protection
- Non-ferrous metal design up to PN 16 bar
- SVGW certification
- **CE** Conformity according to the European Measuring Instrument Directive (MID)
- Flood-proof register (IP68) with Multiprotocol interface (MP), 5 m cable and provision for a HRI pulser
- M-Bus standard unit load: 2 unit loads (3 mA)

Options

- High-pressure series up to PN 40 bar
- High-resolution pulse generator HRI
 - [Documentation: HRI - EPe10213](#)
- Radio module RCM[®] split
 - [Documentation: RCM[®] - EPe40232](#)
- Radio module RCM[®]-LRW
 - [Documentation: RCM[®]-LRW... - EPe40261](#)

GWFcoder®-Technology

In the GWFcoder®system, the individual rollers of the mechanical register are read out optoelectronically. The position of the various long asymmetrically arranged slits in the roller counters is scanned using 5 light barriers (lightpipe transmitter and receiver). The light barriers are implemented with phototransistors. LEDs, and light conductors, which are all consecutively scanned and evaluated. The precisely defined position of each individual roller counter is encoded as an absolute roller counter reading and read out as a part of the protocol via the GWFcoder® interface. This functioning principle is patented by GWF. The GWFcoder® interface, compared to a meter with a pulse output, has an incomparably higher level of information content and readout accuracy. A GWFcoder® register does not require a battery, which, in turn, does not compromise existing revision cycles. The readout device supplies the power for the readout.

Moreover, all products with multiprotocol functionality provide the flexibility to switch between wall readout (inductive or CL), Wired M-Bus or radio readout which leads to an easy and fast «Plug & Play» installation on site.

Medium	Water
Absolute meter reading	123654 m ³
Serial number	43215678
Meter size	DN 50

M-Bus: EN 13757 --> Cable colors black / red, polarity independent

ECO: EN 13757-3 --> Cable colors black / green / red, note polarity

Example of use

Wireless read-out

Meter with GWFcoder® register is read out automatically by radio using a mobile infrastructure (for example radio module RCM® and MEx).
